

Know your market position. Get a roadmap you'll actually follow.

Career Trajectory Optimizer — AI career coach for Indian tech professionals

A Deep Agents system that parses your profile, researches the live Indian tech market, benchmarks your salary, and scores your risk — then, if you state a goal, builds a personalized 30-60-90 day roadmap. One orchestrator plans and delegates to eight specialist subagents; nothing is synced to a calendar without your approval.

THE PROBLEM WITH CAREER DECISIONS

Indian tech professionals make career decisions with fragmented, incomplete information. Salary data is scattered across AmbitionBox, Levels.fyi, and Glassdoor. GenAI roles are growing roughly 180% year-over-year, but few people know it. Nothing correlates your actual profile — skills, tenure, education tier — against the market and against a stated goal. A generic chatbot will happily invent a plausible-sounding salary number or timeline; in a career decision, a confident wrong answer costs you months.

WHY IT'S BUILT THIS WAY

Reads your whole profile

profile-analyzer parses a resume upload (PDF/DOCX/TXT) or manual entry into a structured timeline, detecting education tier and flagging job-hopping or long tenure.

Researches live, not stale

market-researcher is the only subagent with web search (LinkUp primary, Tavily fallback) — it gathers current data so every other subagent reasons from the same grounded brief.

Never invents a number

Every salary range and risk score traces back to the grounding file or the researcher's findings — deterministic validators catch missing or out-of-range values before they reach you.

Explains your gap

career-recommender applies goal-specific logic — target salary, company, role, or GenAI transition — and states the gap and the levers that close it.

Plans its own steps

The orchestrator classifies your brief into Profile Analysis Mode or Career Aspiration Mode and delegates accordingly, running independent subagents concurrently to cut wall-clock time.

Reviewed before you see it

A dedicated critic subagent checks grounding accuracy, methodology compliance, and internal consistency across every file before the run completes.

WHAT'S ACTUALLY UNDER THE HOOD

8

specialist subagents, one orchestrator

2

modes: Profile Analysis & Career Aspiration

5

risk axes scored: salary, skill, security, burnout, growth

30-60-90

day roadmap for every stated career goal

≤60s

bounded LLM call timeout — no silent multi-minute stalls

GREAT FOR

Working engineers

See exactly where your current pay and skills sit against the market before you ask for a raise or start interviewing.

Job switchers with a goal

State a target salary, company, or role and get a gap analysis plus a concrete 30-60-90 day plan.

GenAI upskillers

Understand the skill premium and the shortest realistic path to a GenAI-focused role.

Career coaches & mentors

Use the grounded dashboard as a structured starting point for a coaching conversation, not a black-box score.

Config-driven setup, not a rewrite. Swap the model, add LinkUp/Tavily keys, or point the backend at a different store entirely through `.env` — the subagent prompts and orchestration logic never change.

Get your market position in minutes.

Open source · learning project · OpenAI + LinkUp/Tavily · runs on your own machine with Streamlit or Jupyter.

1. `uv sync`
2. `streamlit run app.py`
3. Upload your resume
