

Using Career Trajectory Optimizer

Understand your market position, or get a roadmap to a stated goal

A practical walkthrough: what to upload, how Profile Analysis Mode differs from Career Aspiration Mode, how to read the risk dashboard and roadmap, and how the calendar-sync approval step works.

Resume upload

Goal-based roadmap

Human-approved sync

WHO THIS IS FOR

Working engineers

See your current market position — salary range, skill demand, and readiness — before a performance review or job search.

Job switchers with a goal

State a target salary, company, or role and get a gap analysis with a concrete 30-60-90 day plan.

GenAI upskillers

Understand the GenAI skill premium and the realistic timeline to transition into a GenAI-focused role.

Coaches & mentors

Use the grounded dashboard as a structured, citation-backed starting point for a coaching conversation.

GETTING STARTED

1

Upload your resume (PDF, DOCX, or TXT) — the extracted text appears in an editable box so you can review or add details before running.

2

State a career goal for a full roadmap, or leave it blank for a market-position analysis only.

3

Click Run analysis and watch the live status panel as the orchestrator delegates to each subagent in sequence.

EXAMPLE GOALS

GOAL TYPE	EXAMPLE
Profile Analysis	"No goal — 4 years as a Backend Engineer, Python/Django/AWS, tier-2 college. Just show me where I stand."
Salary goal	"I want to earn ₹100L within 2 years."
Company goal	"I want to transform into an AI FDE engineer at FAANG."
Role goal	"I want to become a Tech Lead within my current company."
GenAI transition	"I want to become a GenAI Engineer within 6 months."
Relocation goal	"I want to work remotely for a US company."

READING A RESULT

Risk dashboard

Five scores (0-10 each): salary, skill, security, burnout, growth risk — validated in code, not self-reported by the model.

Human approval gate

Before any calendar-sync action, the run pauses and shows exactly what it wants to do. Approve or reject — nothing is synced without your decision.

LIMITS, HONESTLY STATED

What it won't do. Without a LinkUp or Tavily key it falls back to grounding-only market facts — still honest, but not live. The calendar sync is **simulated**; nothing is ever actually written to a real calendar. Salary and timeline estimates are grounded projections, not guarantees — always sanity-check a major decision against current, specific offers.

BEST PRACTICES

- Upload a complete resume rather than a short summary — profile-analyzer works from whatever text it receives.
- State a specific, time-bound goal ("₹100L in 2 years") rather than a vague one ("more money") so the recommender can compute a real gap.
- Review the extracted resume text box before running — fix any parsing gaps first.
- Treat a long run time (several minutes) as normal, not a hang — the live status panel shows which subagent is currently working.

Get a grounded answer, not a guess.

Every number traces back to your profile or the market-researcher's findings — reviewed by a dedicated critic before you see it.
